How to Use

By coloring the math tools, students can work toward a treat in the future. Set up a structure where they can slowly earn some kind of reward as a class.

A simple way to do this is by coloring one item in the letters "MATH" each time you determine they have earned one. You can set this up however you want.

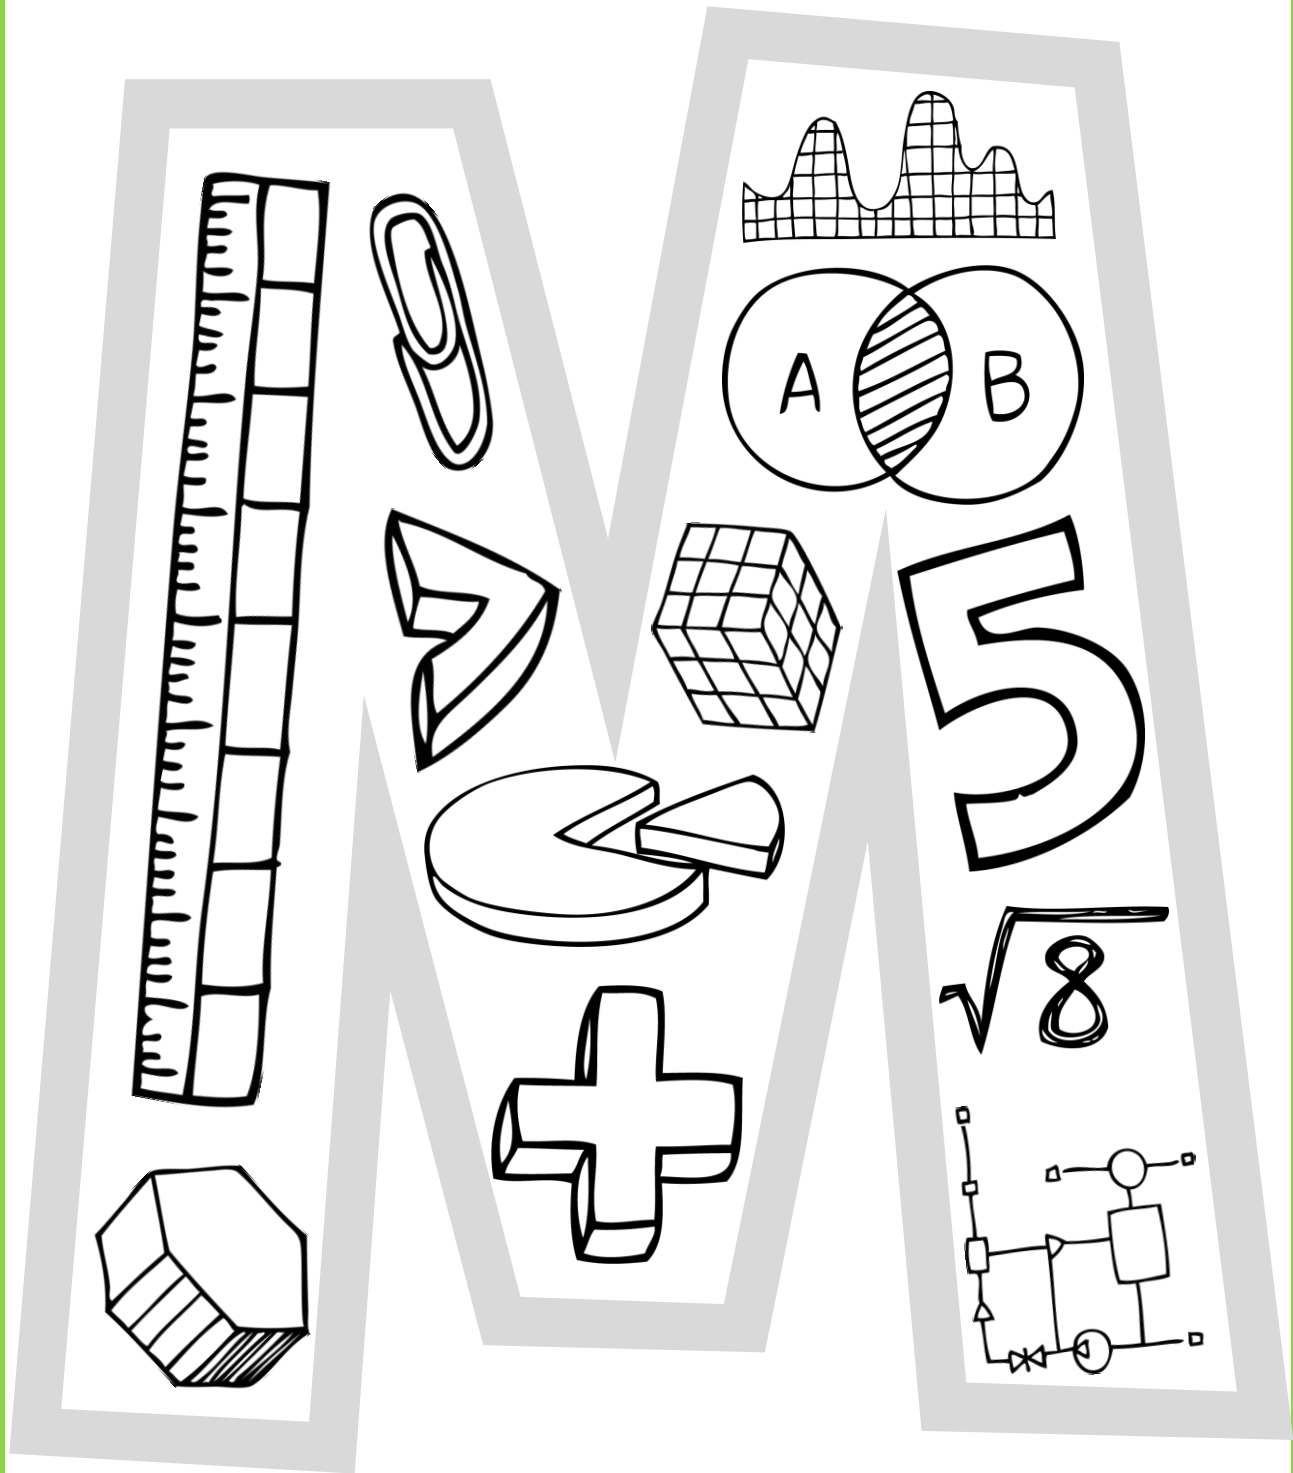

Print one set (large size) to hang up on your bulletin board. Choose either the ones with colored borders, or print the black and white option and frame them with a colored background.

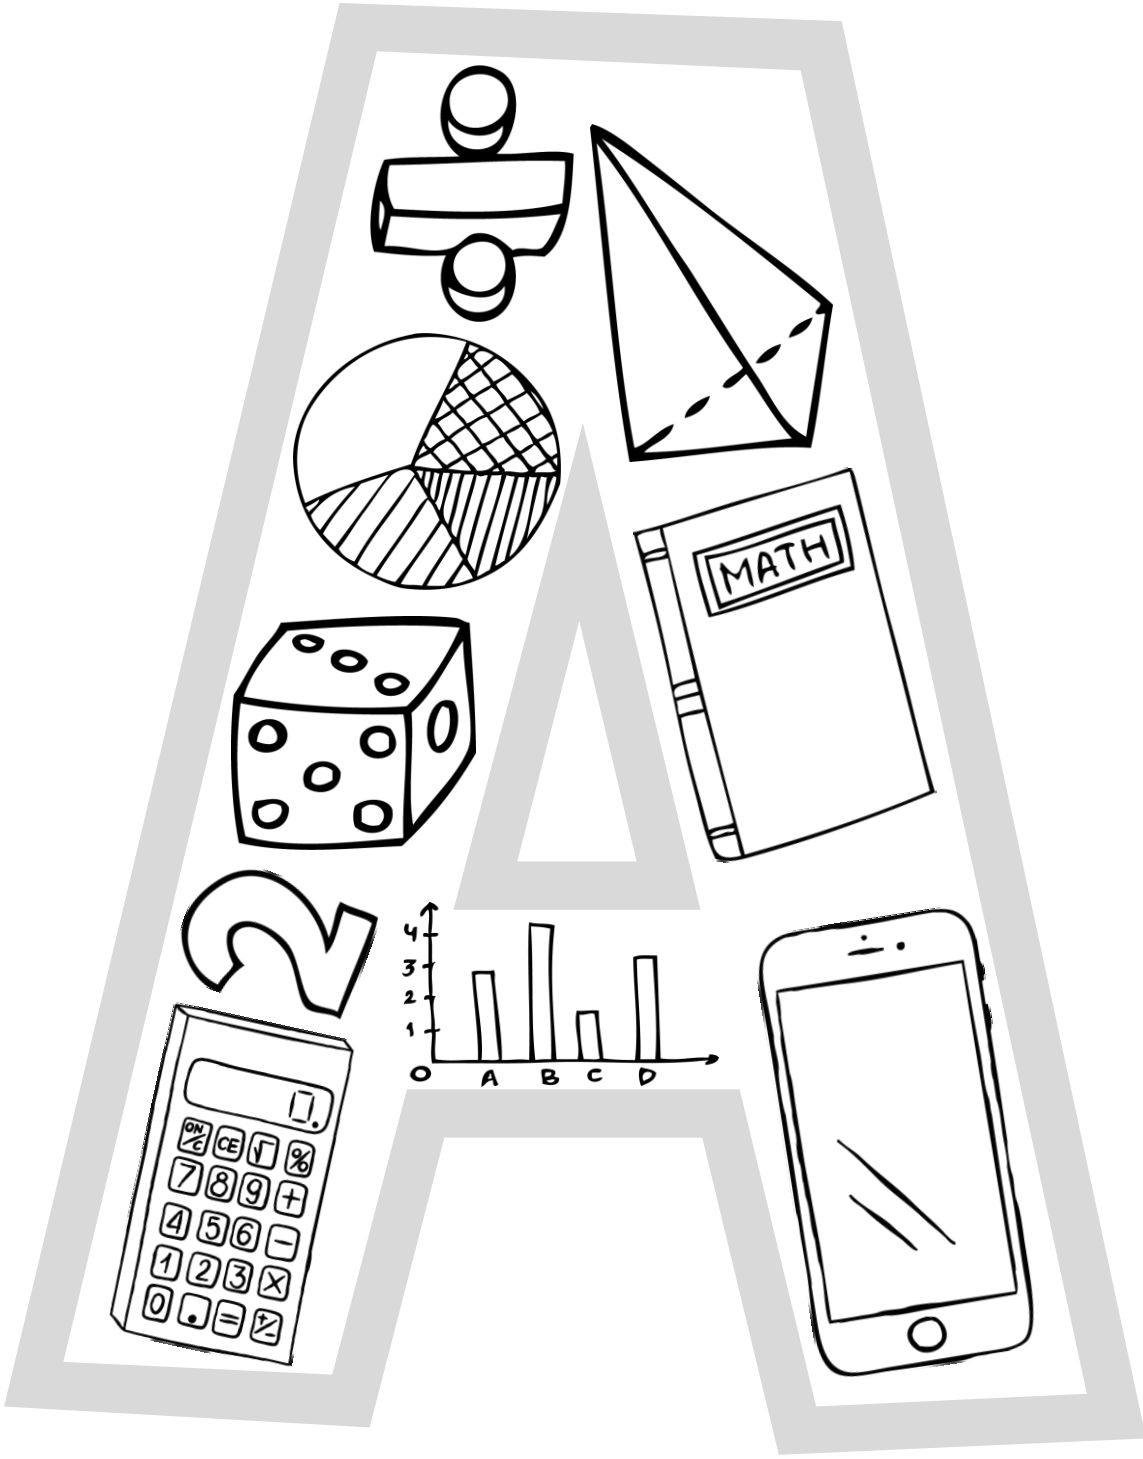

You may want an item to get colored only on each day that ALL students submit completed homework. Or you can use it as a reward when a student gets caught doing something great. Say "I love the way you just _____. Go ahead up and color one math symbol on our MATH board."

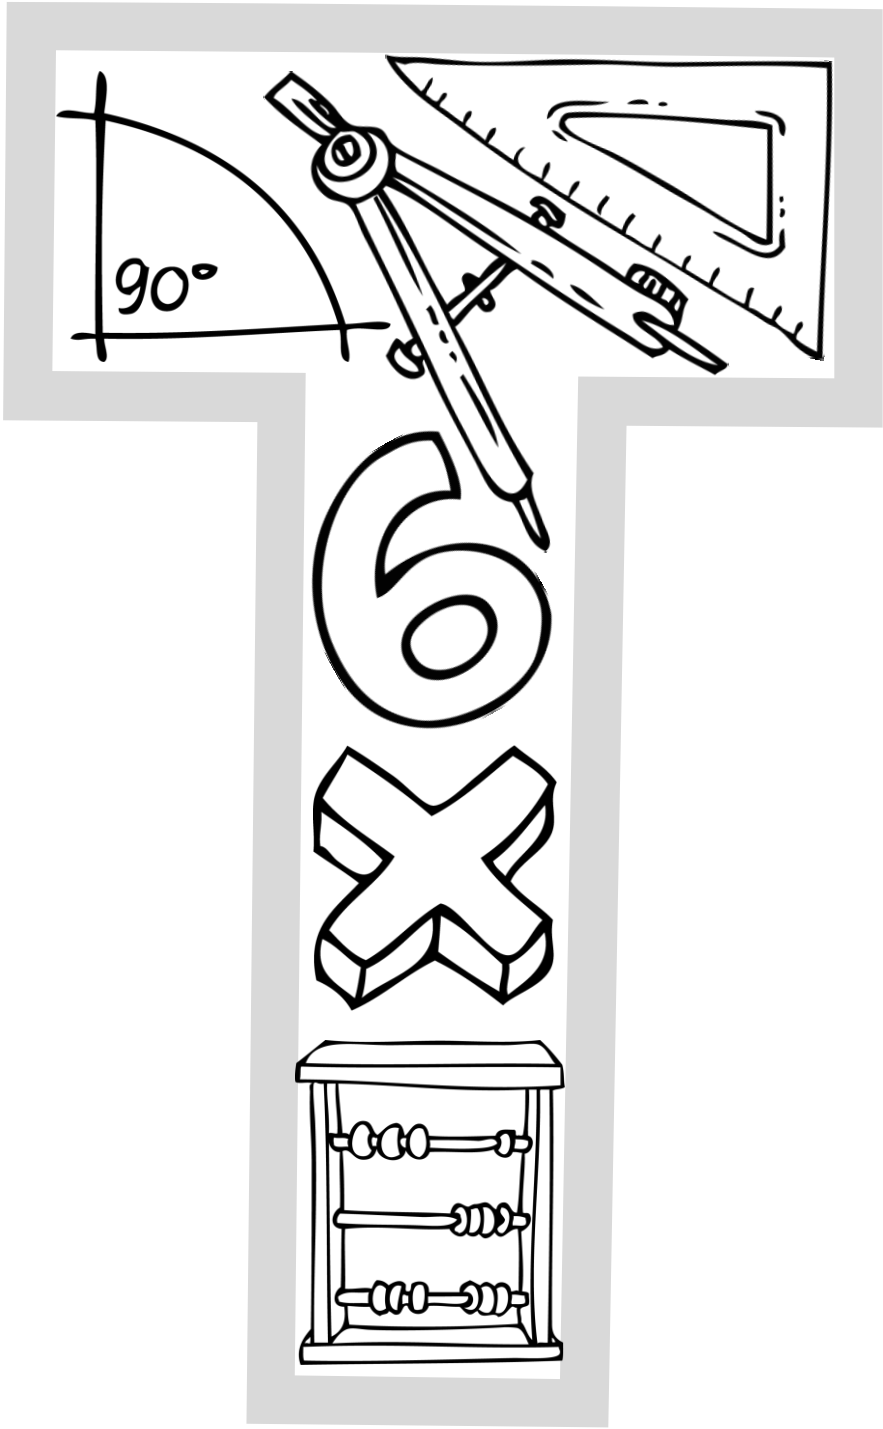

Once the full word "MATH" is all colored in, the class can earn a reward.

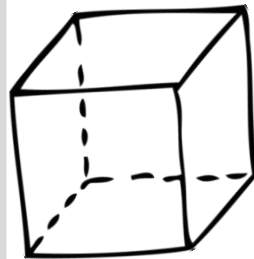

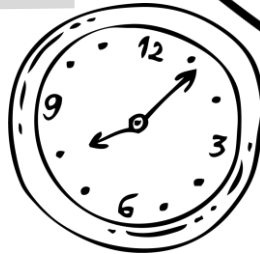

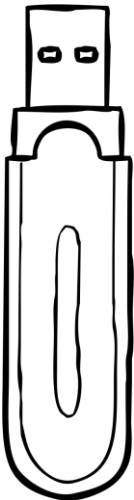

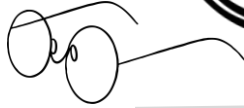

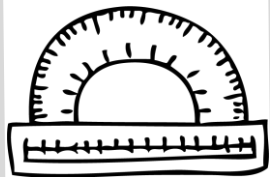

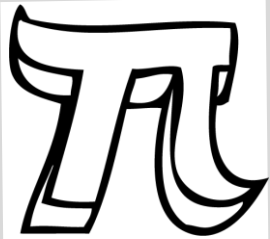

I've also included a mini version for a desk-sized individual option. Each student can work to earn their own reward by coloring it with a special glitter marker you only hand them as you walk around to check daily homework. If they have it complete, you offer the special pen to color one math tool as you authorize it.
